

ABSTRACT OF DISCLOSURE

An ink-jet printer includes an ink cartridge mounted in a carriage that is disposed at a guide shaft and reciprocates, and having a print head formed at a lower portion thereof to eject ink on an ink ejecting area, a feeding roller to convey printing paper under the print head, and a waste ink-collecting unit to collect waste ink that is ejected from the print head onto an area other than the printing paper. The waste ink-collecting unit includes a waste ink-collecting tank disposed under the print head, to collect the waste ink falling down from the print head, and a collecting roller rotatably disposed at an entrance of the collecting tank, to guide the waste ink falling down from the print head to the collecting tank.
